## INTRODUCTION

This annual statistical report is a supplement to the regular biennial report issued by the Montana State Board of Health. Vital statistics data are published on an annual basis so that the information can be made available more quickly than if it were published bieanially.

The purpose of this report is to provide a ready reference of some of the most frequently used vital statistics for Montana. Since the report is primarily intended for reference, analysis and interpretation have been kept to a minimum. Where space permits, the 1966 data are accompanied by figures for the previous year or years so that comparisons may be made. The information published here is limited to that felt to be of general interest. In most cases, more detailed information is available upon request.

The sources of data shown in the tabulations of this report are records collected by the Montana Board of Health. These include certificates of birth, death, and fetal death (stillbirth) and records of marriage, divorce, and morbidity

## LIMITATIONS OF THESE DATA

### Completeness of Registration and Reporting

Few restrictions need be imposed upon the interpretation of tabulations of birth and death data in this report because of incompleteness. Completeness of birth registration in Montana was tested in 1950 as a part of a nationwide study made by the Bureau of the Census. This showed Montana's registration of births to be 99.0% complete. Registration of deaths is felt to be more complete. A death certificate must be filed in Montana before a permit for burial or removal can be issued.

No measure of the completeness of reporting of fetal deaths (stillbirths) is available. A more important limitation to consider in interpreting data on this subject is: The variation among the several states as to the definition of what constitutes a fetal death.

Official records of marriage and divorce are not filed in this office. It does file original birth and death certificates. Transcripts, containing selected items of information on the original marriage and divorce records, are made by local Clerks of Court to be filed in this office. No formal tests of completeness have been made on this reporting. Experience suggests that marriages and divorces are reported as completely as births and deaths.

### Delay in Filing

Very few records are filed for events that occurred in the year covered by this report that are not included in these tabulations. All records for 1966 which were received during that year or by April 10, 1967, are included in this report. Records received after this deadline are not included in these tabulations. Such records constitute a small fraction of one percent of all types of records.

### Geographic Allocation

Births and deaths may be tabulated by place of occurrence or by place of residence of the person involved. For deaths, the place of residence is the usual residence of the decedent. For births, the usual residence of the child is the same as that of the mother.

Interstate exchange of transcripts of certificates for persons whose residence was in a state other than the one in which the event occurred permits tabulation by place of residence. Titles of tables in this report indicate whether the data are by residence or occurrence.

Deaths in hospitals, sanatoria, and other institutions are allocated to the place of previous residence, regardless of the length of stay in the institution.

### Medical Certification

Causes of death reported on death certificates are classified according to the Seventh Revision of the International Statistical Classification of Diseases, Injuries, and Causes of Death. This system, established by international agreement, attempts to allocate death to what the attending physician considers to be the underlying cause. It also serves to obtain information on the causal and chronological sequence of events leading to death. It consists of two parts with space for indicating the interval between onset and death for each condition. Part I is used for reporting the causes leading directly to death. Part II is used for reporting any other important diseases or conditions that influenced the course of the illness unfavorably, thus contributing to the fatal outcome, but which were not related to the disease or condition reported on line (a) as the immediate cause of death. To illustrate, a medical certification might read as follows:

#### Part I. Death was caused by:

- Immediate cause (a) postoperative bronchial pneumonia
- Due to (b) lobectomy
- Due to (c) primary cancer of lung

#### Part II.

##### Hypertensive cardiovascular disease

This death would be assigned to International List rubric 162.1 (Malignant neoplasm of bronchus and lung).

Deaths are classified under this philosophy whenever possible.

Exceptions must be made when the underlying cause is not apparent from the certification and when clarification cannot be secured. In these instances, a system of rules is applied to select the probable underlying cause.

### Age and Race

Classification of vital events by age and race introduces difficulties because of incorrect entries.

A common error in the reporting of age is evident in the frequent reporting of ages ending in 0 and 5. Theory suggests this to be due to a tendency for persons to round their ages. In addition, it is felt that persons under 21 and those in the older age groups have a tendency to overstate their age. An attempt has been made in this report to offset some of these difficulties by grouping ages. In this way, the overstatement of ages ending in 0 and 5 is grouped in with the understatement of ages ending in other digits.

The tabulation of vital events by race has limitations where persons of mixed blood are involved. In general, the statement of race on the certificate reflects the opinion of the informant. It does not necessarily follow any prescribed rules for the reporting of race. Information on race presented in this report is shown simply as "white" and "other". This makes it possible to classify all but a few deaths, and there is little confusion with concepts of nationality, country of origin of parents, or other characteristics. In the racial classification used in this report, white includes "Mexican".

### Population Estimates

The population estimates shown in Table 25 have as their base the Federal Census taken as of April 1, 1960.

The United States Bureau of the Census has estimated the total population of Montana as 702,000 as of July 1, 1966. The 1966 population estimates for Montana Counties were prepared by allocating this State total to the 56 counties. A component method of population estimation was used utilizing school census data as a measure of net migration.

Table 1

## DEATHS, LIVE BIRTHS, FETAL, INFANT, AND MATERNAL DEATHS

Montana, 1910-1966

(Deaths exclusive of fetal deaths. Data for 1910-1945 are by place of occurrence.  
Data for 1946-1966 are by place of residence.)

Year	Estimated Midyear Population	DEATHS		LIVE BIRTHS		FETAL DEATHS		INFANT DEATHS		MATERNAL DEATHS

(1) Per 1,000 estimated population.

(2) Per 1,000 live births.

Note: The estimated populations and many of the birth and death rates for 1951-59 are different from those published in previous years. The estimated midyear population estimates have been revised to conform with those published by the U. S. Bureau of the Census REVISED ESTIMATES OF THE POPULATION OF STATES AND COMPONENTS OF POPULATION CHANGE 1950-1960 (Series P-25, No. 304). These revised population estimates have been used to recalculate the birth and death rates for 1951-59.

The 1940, 1950, and 1960 populations are those enumerated as of April 1.

Information on fetal death is not available prior to 1922.

SUMMARY OF LIVE BIRTHS  
Montana, 1965-66

(By place of residence. Each percent has been independently rounded to the nearest one-tenth of one percent; hence, the sums of parts may differ slightly from the totals shown.)

Item	1966		1965	
	Number	Percent	Number	Percent
Total	12,623	100.0	13,641	100.0
Sex:				
Male	6,358	50.4	7,059	51.7
Female	6,265	49.6	6,582	48.3
Legitimacy:				
In wedlock	11,779	93.3	12,823	94.0
Out of wedlock	844	6.7	818	6.0
Multiple births:				
Single	12,377	98.1	13,369	98.0
Twins	243	1.9	267	2.0
Triplets	3	0.0	5	0.0
Living Children:				
First child	3,998	31.7	3,938	28.9
Second child	3,101	24.6	3,127	22.9
Third child	2,035	16.1	2,331	17.1
Fourth child	1,327	10.5	1,673	12.3
Fifth child	881	7.0	1,084	7.9
Sixth child	531	4.2	602	4.4
Seventh child	303	2.4	332	2.4
Eighth child	181	1.4	208	1.5
Ninth or more	260	2.1	321	2.4
Not stated	6	0.0	25	0.2

\*Deaths per 100,000 estimated midyear population.

Note: Rates for 1951-59 shown in this table may differ from those previously published because of recalculation of estimated populations. See note on Table 1.

Data for 1910-45 are by place of occurrence. Data for 1946-66 are by place of residence.

Table 25  
POPULATIONS  
Montana Counties: 1960 and 1966

County	1960 Census Enumeration	1966 Estimated Population	County	1960 Census Enumeration	1966 Estimated Population
Montana, Total	674,720*	702,000	Lincoln	12,537	13,500
Beaverhead	7,194	7,600	McCone	3,321	3,400
Big Horn	10,007	10,400	Madison	5,211	5,500
